

Body: The body is white with borders of Grey, as well I want it to look professional and complete. This will allow me to be able to effectively show off my objects. As of right now I'm not fully complete with the website as I'm still developing it but I want to make a navigation bar at the top.

Paragraphs: Many of the paragraphs should be set to Helvetica and the color of the font black. This will allow for the links imbedded not to look like links at all and just flow with the paragraphs.

Header: I want the headers to eventually go into a navigation bar but for now I want it to look like it is clean. This will allow for bold facing letters that stand out but don't bring too much attention.

Navigation: The navigation links will allow for people to do the many things to navigate the website and they will be black. This will allow you to go to other links and also allow you to be able to go back to previous pages, I haven't put that in yet though.

Footer: In the future this will have just a floating footer that will help you navigate and also giving our legal debriefing with copyright laws.

Divs: For the footer. This will allow for you to go to other pages or refresh to the beginning.

There will also in the future be more that will enable you to look at the product you want to buy.
